## **AMENDMENTS TO THE CLAIMS:**

The listing of claims will replace all prior versions, and listings of claims in the application:

## LISTING OF CLAIMS:

1. (Currently amended) A method of <u>annotating providing an active</u> annotation mechanism for use in association with a document of a document management system, where the document has an annotation added, the method comprising:

electronically scanning the document;
detecting the annotation added to the scanned document;
decoding the detected annotation;
examining content of the decoded annotation;
determining an action to be undertaken with reference to the document, based on the content of the annotation; and performing the action required by the content of the annotation.

- 2. (Currently amended) The method according to claim 1 wherein the annotation is detected by an active annotation mechanism is configured to be aware of a nature of the annotation content and applications whose behavior needs to be is coordinated to perform the action required by the annotation, and wherein operation of the active annotation mechanism permits performance of the action required by the content of the annotation without user intervention.
- 3. (Currently amended) The method according to claim <u>1-2</u> wherein the active annotation mechanism is invoked when the document is stored.
- 4. (Currently amended) The method according to claim <u>1-2</u> wherein the active annotation mechanism is invoked at predetermined time intervals.
- 5. (Original) The method according to claim 1 wherein the annotation carries at least one of an activity to be carried out and a parameter that configures that activity.

- 6. (Original) The method according to claim 1 wherein the annotation is stored with the document.
- 7. (Original) The method according to claim 1 wherein the annotation is stored separate from the document.
- 8. (Original) The method according to claim 1 wherein the active annotation mechanism operates over at least plain text, files, program source code and presentations.
- 9. (Previously presented) The method according to claim 1 wherein the annotation is placed on the document at least as one of an in-line annotation and an out-of-band annotation.
- 10. (Currently amended) A method of <u>annotating providing an active</u> annotation mechanism for use with a document in a document management system capable of dynamically changing a system configuration of the document, the method comprising the steps of:

generating executable code to detect update data added to the document, wherein the update data are annotations which require an action to be undertaken;

assigning the executable code to an active property for dynamically changing the system configuration of the document to include the desired configuration which achieves the desired operation;

attaching the active property to the document, the property identifying a the desired operation to be undertaken in connection with the document as required by the annotation;

assigning a triggering event to the property such that the property invokes the executable code in response to the triggering event; and

upon an occurrence of the triggering event, invoking the executable code of the property and dynamically changing the system configuration of the document to include the desired configuration, as required by the annotation.

11. (Currently amended) The method according to claim 10 wherein the

<u>an</u> active annotation mechanism is configured to be aware of a nature of the ef the annotation content and applications whose behavior needs to be coordinated to perform the action required by the annotation.

- 12. (Currently amended) The method according to claim 1011 wherein the active annotation mechanism is invoked when the document is stored.
- 13. (Currently amended) The method according to claim 4011 wherein the active annotation mechanism is invoked at predetermined time intervals.
- 14. (Original) The method according to claim 10 wherein the annotation carries at least one of an activity to be carried out and a parameter that configures that activity.
- 15. (Original) The method according to claim 10 wherein the annotation is stored with the document.
- 16. (Original) The method according to claim 10 wherein the annotation is stored separate from the document.
- 17. (Currently amended) The method according to claim 1011 wherein the active annotation mechanism operates over at least plain text, files, program source code and presentations.
- 18. (Previously presented) The method according to claim 10 wherein the annotation is placed on the document at least as one of an in-line annotation and an out-of-band annotation.
- 19. (Currently amended) An active annotation mechanism for use in association with a document of a document management system, where the document has had an annotation added, comprising:
- a scanning mechanism to electronically scan the <u>content of the</u> document;
  - a detector to detect the annotation added to the scanned

## document;

a decoder to decode the detected annotation;

a detector to determine the <u>contents content</u> of the annotation, and an action to be undertaken with reference to the document, based on the <u>content</u> of the annotation; and

a performance mechanism to perform the action required by the content of the annotation.

- 20. (Previously presented) The method according to claim 10 wherein the annotation is placed on the document at least as one of an in-line annotation and an out-of-band annotation.
- 21. (New) The mechanism of claim 19 wherein the performance mechanism performs the action required by the content of the annotation without user intervention.
